Turun normaalikoulu

Education creates the future.

About Us

Turun normaalikoulu has two missions that are closely intertwined. Firstly, we provide high quality education and secondly, we are a part of the Faculty of Education of Turku University playing a central role in the training of prospective teachers. Turun normaalikoulu has about 100 teachers (also acting as teacher educators) and 300 teacher trainees working on the same premises. Turun normaalikoulu has been a UNESCO-school since 1999.

Qualified teachers

Inspiring atmosphere

Motivated students

The School

The school is located in an urban environment three miles from the centre of the city. The surrounding community is economically and culturally diverse. Students taking the national curricula typically come from the local community, but the IB Diploma Programme serves a wider region.

CURRICULUM

The Finnish national upper secondary curriculum is an academically challenging three-year programme preparing the students for national matriculation examinations to pass the secondary education diploma (Ylioppilastutkinto). The annual intake is 52.

For the IB Diploma Programme the annual intake is between 50-60. The IB Diploma Programme is preceded by a one-year Pre-DP Programme. We offer the following subjects: Finnish, English, Swedish, German, French, economics, history, psychology, business management, biology, chemistry, physics and mathematics.

PROGRAMS

In addition, we offer business studies for all of our students,
