## UN on 1 April 2020: COVID-19 likely to shrink global GDP by almost one per cent in 2020

Governments are considering and rolling out large stimulus packages to avert a sharp downturn of their economies which could potentially plunge the global economy into a deep recession.

According to <u>UN DESA\*</u> on 1 April 2020, the world economy could contract by 0.9 per cent in 2020 in the worst-case scenario.

# World growth outlook for 2020 in the best- and worst-case scenarios, as of late March 2020

#### Source: UN DESA.

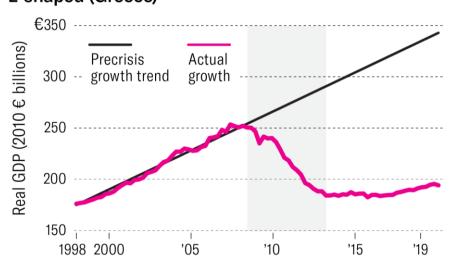

# Examples of three types of economic shock:

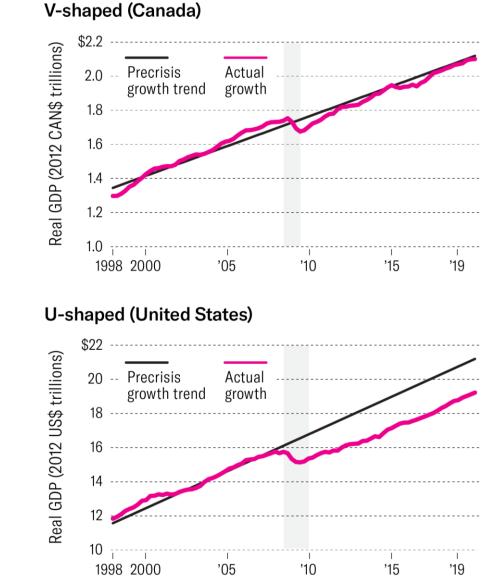

# the L-, V- and U-shaped developments

### Examples of three types of economic shock: the L-, V- and U-shaped developments

### **Economic Shock: 3 Examples**

The concept of a recession is binary and blunt. The bigger-scenario question revolves around the shape of the shock and its structural legacy. To illustrate, consider how the 2008 global financial crisis delivered recessions in three sample countries, yet followed vastly different shapes in terms of shock progression and recovery.

<u>Philipp Carlsson-Szlezak</u>, <u>Martin Reeves</u> and <u>Paul Swartz</u>, Harvard Business Review, 27 March 2020; read more <u>here</u>

**⊽ HBR** 

### Two Economic Supply-Side Threats from Covid-19

The Covid-19 shock uniquely raises liquidity and capital risks in both the financial system *and* the real economy simultaneously.

The two paths of COVID-19's structural damage in a **U-shaped scenario**:

**Financial system risks.** The unprecedented Covid-19 shock has already generated stress in capital markets, triggering a forceful response from central banks. If liquidity problems persist and real economy problems lead to write-downs, capital problems can arise. While from a policy perspective we may know the solutions, bailouts and recapitalization of banks are politically controversial. In the case of a financial crisis, capital formation would take a huge hit, driving a prolonged slump with damage to labor and productivity as well.

**Extended real economy "freeze.**" The truly unprecedented possibility. Months of social distancing could disrupt capital formation and ultimately labor participation and productivity growth. Unlike financial crises, an extended freeze of this magnitude damaging the supply side would be new territory for policy makers.

	Financial system shock	Real economy "freeze"
Liquidity problems	Liquidity problems hamper credit intermediation and investment	Healthy households and companies face severe cash-flow problems, hampering investment
Capital problems	Capital problems shut credit channel, damaging capital formation and ultimately growth	Damaged household and company balance sheets cripple investment and ultimately growth

# How long will this last, and what shape will it take?

- well, too early to say:

nobody seems to have the answer right now, only good or less good guesses...

## An initial "questimate"\* of broader impacts of COVID-19 in EU countries: social problems may become the main concern by early 2021

Source: Prof. Lauri Ojala; updated on 9 April 2020

# What type of financial or economic help is on offer?

## Some of the largest help packages since mid-March 2020

- On Thu, <u>26 March 2020</u>, <u>G20</u> economies announced to pump US\$5,000 billion into the world economy as part of a joint pledge to use all policy tools available to cushion the impacts of the global COVID-19 pandemic
- <u>ECB</u> (European Central Bank) injected an additional **870 billion euro** about 7% of the euro area's GDP into financial markets to address the challenge. Through its refinancing lines it is also making up to **3,000 billion euro** in liquidity available, at the lowest interest rate it has ever offered: -0.75%.
- <u>IMF</u> (International Monetary Fund) ready to deploy US\$1,000 billion in lending capacity
  - On 25 March 2020, IMF launched a <u>Tracker</u> of fiscal, monetary or macro-financial policies Governments are taking in response to COVID-19 covering 186+ economies
- The <u>EIB Group</u> (European Investment Bank) has proposed a plan to mobilise up to €40 billion of financing.
- On 17 March 2020, <u>World Bank Group Increases COVID-19 Response to US\$14 Billion To</u> <u>Help Sustain Economies and Protect Jobs</u>

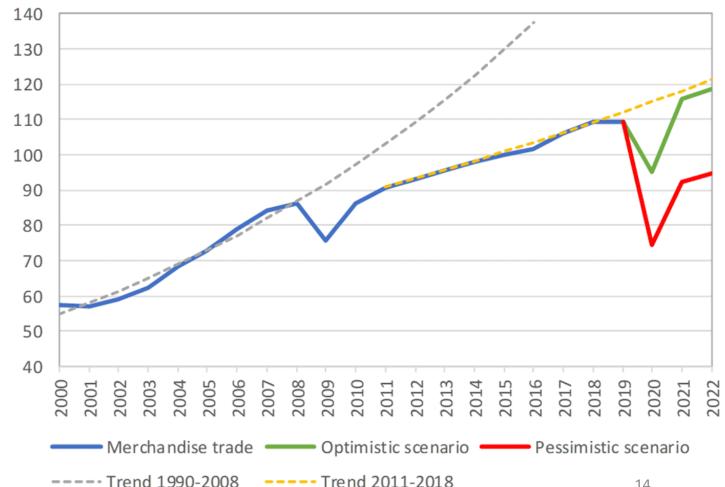

# How does COVID-19 impact on trade and supply chains look like now\*?

\*) Early April 2020

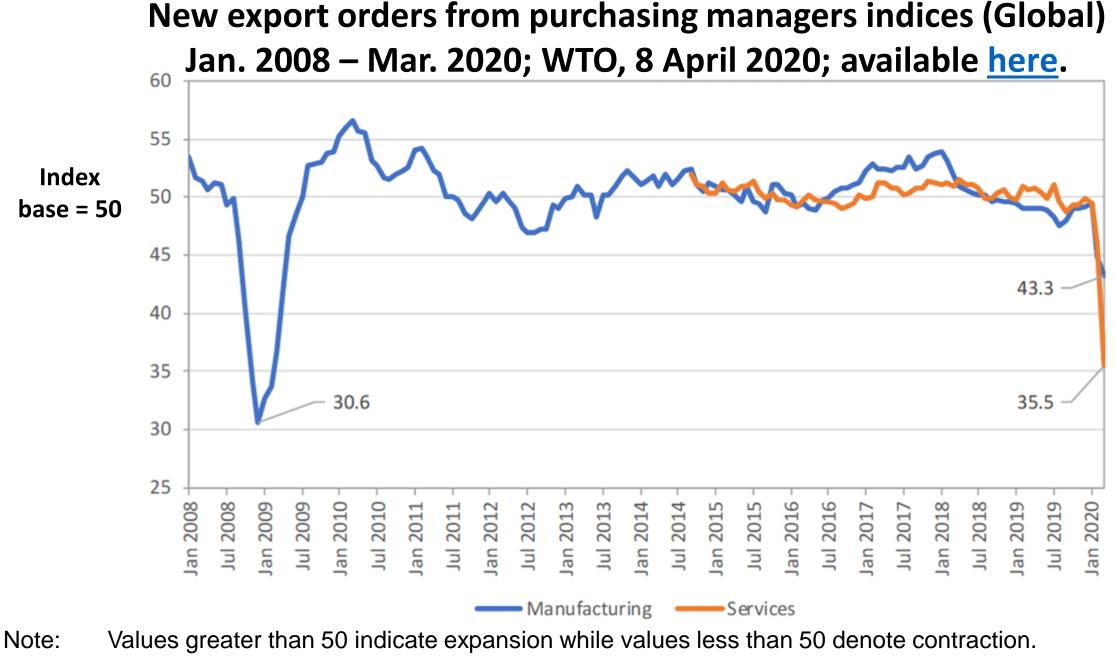

## WTO on 8 April 2020: Trade set to plunge as **COVID-19 pandemic upends global economy**

WTO expects world trade to fall by between 13% and 32% in 2020 as the **COVID 19 pandemic** disrupts normal economic activity and life around the world.
