

A research environment conducive to school development

The Rauma Teacher Training School is an important part of Turku University's Faculty of Education and its research activities with the Rauma campus teacher training unit. Staff and teacher training students conduct research and experiments related to school development and studies.

High quality scientific research supports teaching and inclusion

Research on our own campus and with the Faculty of Education of Turku University gives a strong scientific basis for teaching implementation and community development. The University of Turku learning and teaching research center CERLI is an important partner for us nationally and internationally in the field of high-quality research.

Rauma Teacher Training School is an active player in the network of training schools that promote TutKoKe activities (TutKoKe refers to research, experimentation, and development). Being active and enthusiastically participating and experimenting is the strength of teacher training schools. The school of the future is developed in teacher training schools.

The staff and teacher trainees are inspired to develop themselves and the field of education.

Research, experimentation, and development in the national teacher training school network

Get inspired by research.
